

## Installing XML API Desktop Solution 2 Updates

These instructions support the 23 April 2008 maintenance release of XML API Desktop Solution 2.

### What's New

- New and updated XML transactions, and their associated DFL files, are available for XML API Desktop Solution 2.
- Updates have been made to the Help system to support these new transactions. See the *What's New* topic in the Help system for more details.

### Please Note:

- This update does NOT require a re-installation of XML API Desktop.
- Any previous updates of XML API Desktop are inclusive in this update. Therefore, no interim updates are required between the initial XML API Desktop installation and this update. See [ReleaseHistory\\_Solution2.htm](#) for a comprehensive list of update details.

### To Add New DFL Files for XML API Desktop Solution 2:

1. Read the specific details on the updated transactions to determine if application changes are required to support the modifications. As always, it is strongly suggested that this maintenance update be loaded to a test environment and fully tested prior to moving to a production environment.
2. Confirm that XML API Desktop Solution 2 is already installed on the target machine.
3. Ensure that Galileo Desktop and any client applications that use XML API Desktop Solution 2 are closed.
4. Download the **XAD2\_23APR08.zip** file from the XML API Desktop/Solution 2/Download page.
5. Open the **DFL** folder from XAD23APR08.zip.
6. Copy the new DFL files into the common **DFL** folder.  
By default, this folder is located in **C:\\Program Files\\Common Files\\Galileo International Shared\\Uta\\DFL\\**. If prompted to overwrite existing files, click **Yes**.

### To Update the XML API Desktop Solution 2 Help:

1. Delete the **On-line Help** folder for XML API Desktop.  
By default, this folder is located in **C:\\Program Files\\Galileo International\\XML API Desktop\\SDK**.

2. Copy the new **On-line Help** folder from XAD2\_23APR08.zip into the **On-line Help** folder.

The file structure and names have not been changed in the new Help system. If you have created shortcuts to the Help files or other files in the SDK folder, they should continue to function normally.
